INTRODUCTION

The extensive literature on calculations in molecular pharmacology was covered in the bibliographies of the two editions of *Quantum Pharmacology* (**Richards, W G** Butterworths, UK (1977, 1983) and brought up to Summer 1985 by **Taylor, J L and Durant, J C** in the *Journal of Molecular Graphics* Vol 3 No 4 (December 1985) p 158. This extension covers literature available up to August 1986 and incorporate omissions from the previous publications that have been brought to our attention. Although we have tried to be comprehensive, we have undoubtedly missed some publications; if the authors could let us know, we will incorporate their work in the next update.

ACETYLCHOLINE
